KEY PRODUCT FEATURES

Four Bristle Hardness Levels for Every Cleaning Need
Select the optimal bristle stiffness to match the instrument type and contamination level, ensuring both thorough cleaning and equipment protection:

- **Extra-Rigid Bristles**
  Nearly as rigid as steel, these bristles are ideal for removing stubborn debris from grooved or heavily soiled instruments.
- **Rigid Bristles**
  Offers a balanced combination of stiffness and length for effective cleaning of standard instruments.
- **Extra-Flexible Bristles**
  Designed for delicate instruments, including optical devices and both flexible and rigid endoscopes. Long fibers enable safe cleaning of sensitive or narrow areas without causing damage.
- **Flexible Bristles**
  Ideal for cleaning fragile instruments, such as those made of optical or plastic materials, as well as tools with hollow or narrow areas. The semi-rigid fibers offer just enough flexibility to navigate tight spaces while remaining gentle enough to prevent damage.

Simplified Color-Coding System
A clear, visual color-coding system makes it easy to distinguish at a glance, reducing training time, minimizing risk of error, and improving overall workflow efficiency in fast-paced environments.
